PROFESSIONAL SUMMARY

Full-stack JavaScript developer with 2 years of experience building and deploying web applications. I build React and TypeScript frontends and Node.js/Express REST APIs on MongoDB and PostgreSQL, secure them with JWT authentication and role-based access control, and ship them to Vercel and Render. Projects include OyoConnect (oyoconnect.ng), a jobs, business and community platform, and a four-role school management system. I trace production problems such as CORS, routing, build and database connection failures to their cause, and I work well independently and in remote teams.

TECHNICAL SKILLS

Frontend	JavaScript (ES6+), TypeScript, React, Vite, React Router, HTML5, CSS3, Tailwind CSS, responsive and mobile-first design
Backend	Node.js, Express.js, REST API design, JWT and refresh-token authentication, role-based access control, validation, error handling, CORS and security middleware
Databases	MongoDB (Atlas, Mongoose, schema design), PostgreSQL (relational design, SQL, Prisma)
Tools	Git, GitHub, Vercel, Render, Postman, production build testing, deployment troubleshooting

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Web Developer 2026 – Present

Remote

- Scope requirements with clients, then design, build and deploy full-stack web applications.
- Iterate on client feedback and fix issues that only appear in production builds.

Customer Support Specialist 2024 – 2025

Remote

- Handled user inquiries by email and messaging, reproduced reported issues, and wrote clear bug reports for the technical team.

Electrical Installation, Solar PV and Industrial Maintenance 2019 – 2022

- Diagnosed and repaired faults methodically, an approach I now apply to debugging software.

SELECTED PROJECTS

OyoConnect – Jobs, Business and Community Platform oyoconnect.ng

React, TypeScript, Vite, Node.js, Express, MongoDB, PostgreSQL, Prisma

- Built a responsive React + TypeScript frontend covering jobs, businesses, community, messaging and wallet services, with routing handled by React Router.
- Developed reusable components, responsive navigation, and dashboard and notification interfaces.
- Built Node.js/Express backend services with JWT authentication and API security hardening, integrated with the frontend.
- Designed a two-database layer: MongoDB for application data and PostgreSQL with Prisma for relational financial data.

The Gentleman's Cut – Barber Booking Web Application Live | Code

React, Vite, React Router, Node.js, Express, MongoDB

- Built a responsive booking site with a dark-and-gold visual identity that holds up on desktop and mobile.
- Structured the booking journey as Service → Barber → Date & Time → Customer Details using reusable components.
- Connected the frontend to Express endpoints backed by MongoDB, replacing hard-coded content.
- Deployed to Vercel and Render, and fixed API connection, routing and booking-flow bugs found in production.

School Management Platform – Multi-Role Web System Deployed

React, Vite, Tailwind CSS, Node.js, Express, MongoDB Atlas

- Built a platform for four roles (student, teacher, parent, admin) with JWT and refresh-token authentication and reusable role-based authorization.
- Diagnosed and fixed CORS, middleware ordering and database connection problems on the live deployment, and refactored Tailwind theming to resolve CSS conflicts.

Other Projects

- Hospital Management System (MERN, live), Online Voting Application (MERN), Sarah Beauty Store (React storefront with a skin-type quiz) and a Ministry website rebuilt from static HTML into a React app with a design-token stylesheet.
- Backend practice APIs: JWT-authenticated Task Manager API, role-based Blog API on PostgreSQL, and a URL Shortener service.

EDUCATION AND CERTIFICATION

BSc, Computer Science – University of the People (Online) In progress
B.Eng., Electrical/Electronics Engineering – LASUSTECH Completed
Full-Stack Web Developer Certificate April 2026
